### 2.31 (d) (2)

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

No member may participate in the IACUC review or approval of an activity in which that member has a conflicting interest (e.g., is personally involved in the activity), except to provide information requested by the IACUC, nor may a member who has a conflicting interest contribute to the constitution of a quorum.

The registrant only has one protocol whose PI is an IACUC member. All present IACUC functions are either directly or indirectly related to the IACUC member's protocol. This PI should not serve as a member of the IACUC because of a potential conflict of interest, but may attend the meeting and advise the IACUC as a guest.

Correct by November 30, 2008

### 2.31 (c) (2)

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

With respect to activities involving animals, the IACUC, as an agent of the research facility, shall inspect, at least once every six months, all of the research facility's animal facilities, including animal study areas, using title 9, chapter I, subchapter A-Animal Welfare, as a basis for evaluation.

Prepare reports of its evaluations conducted as required by paragraphs (c)(1) and (2) of this section, and submit the reports to the Institutional Official of the research facility; Provided, however, That the IACUC may determine the best means of conducting evaluations of the research facility's programs and facilities; and Provided, further, That no Committee member wishing to participate in any evaluation conducted under this subpart may be excluded. The IACUC may use subcommittees composed of at least two Committee members and may invite ad hoc consultants to assist in conducting the evaluations, however, the IACUC remains responsible for the evaluations and reports as required by the Act and regulations. The reports shall be reviewed and signed by a majority of the IACUC members and must include any minority views.

If program or facility deficiencies are noted, the reports must contain a reasonable and specific plan and schedule with dates for correcting each deficiency. Any failure to adhere to the plan and schedule that results in a significant deficiency remaining uncorrected shall be reported in writing within 15 business days by the IACUC, through the

---

Institutional Official, to APHIS and any Federal agency funding that activity.

The IACUC has not developed a formalize checklist or instructions to provide guidance to the IACUC site inspectors in assisting them in performing the semiannual facility site visits. At the present time the site visits are not being performed every six months, and are only performed by one IACUC member. All site visits shall be performed by at least 2 IACUC members, provided that anyone who wishes to perform a site visit shall not be excluded.

The site inspectors shall prepare the reports of their visits which would include, but limited to, date of visit, site visitors, results and recommendations of the site inspection. All deficiencies that were observed on the site visit shall be classified as a significant or minor deficiency. The report shall contain a specific plan and schedule with dates for correcting each deficiency.

Correct by January 1, 2009

There are no animals present at this facility today.

### 2.31 (c)

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(c) IACUC Functions. With respect to activities involving animals, the IACUC, as an agent of the research facility, shall:

(7) Review and approve, require modifications in (to secure approval), or withhold approval of proposed significant changes regarding the care and use of animals in ongoing activities;

Protocol 06-013 has undergone several significant changes regarding the care and use of the animals. These modifications to the protocol have not received formal review and approval by the IACUC. The modifications include:

\*A different entry location on the body for thoracic surgery

\*A change in injectable anesthetics

\*The addition of an anesthetic reversal agent

\*A change in antibiotics postoperatively

Rabbits 30 and 31 recently had surgery under this protocol implementing the above changes without documented IACUC approval. Without prior review and approval, the IACUC no longer has a complete description of the proposed use for the animals under this protocol. All significant changes to protocols must receive IACUC approval prior to implementation.

Correct by: Immediate.

### 2.33 (b)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

(b) Each research facility shall establish and maintain programs of adequate veterinary care that include:

## Inspection Report

---

(4) Guidance to principal investigators and other personnel involved in the care and use of animals regarding handling, immobilization, anesthesia, analgesia, tranquilization, and euthanasia;

Two approved protocols require the use of sodium pentobarbital for euthanasia of regulated animals. The facility is not using a pharmaceutical grade product for this purpose. Commercial sodium pentobarbital euthanasia products are readily available and must be used to assure quality control of the product for this critical procedure.

Correct by: Immediate

(5) Adequate pre-procedural and post-procedural care in accordance with current established veterinary medical and nursing procedures.

Protocol 06-013 requires administration of Buprenorphine every 8 hours postoperatively for a 24 hour period. A review of medical and surgical records indicated that rabbit # 31 received one injection at 4 p.m. June 2, 2008, immediately post-op and a second injection at 12 a.m. June 3. No additional injections were documented at the time of this inspection which was 2:30 p.m., June 3, 2008.

Protocol 06-020 requires administration of Bicillin every other day post operatively during the chronic portion of the study. A review of medical records during the 30 day post operative period indicated that rabbit #29 did not receive antibiotic therapy of any kind.

All post operative analgesics and medications must be administered according to approved protocols to assure adequate pain relief and appropriate veterinary care. Administration of all medications should be accurately documented.

Correct by: Immediate.

### 2.33 (b)

#### ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE.

(b) Each research facility shall establish and maintain programs of adequate veterinary care that include:

(1) The availability of appropriate facilities, personnel, equipment, and services to comply with the provisions of this subchapter;

(2) The use of appropriate methods to prevent, control, diagnose, and treat diseases and injuries.

Several bags of sodium chloride used for fluid administration were stored in the laboratory. One bag was hanging on the IV stand in the treatment room. All were expired with a May 2008 dating. The use of expired agents for therapeutic purposes does not meet acceptable veterinary care standards. Expired pharmaceuticals and fluids should be discarded; their use is not permitted in regulated animals under the Animal Welfare Act.

Correct by: This non-compliance was corrected during this inspection.

### 2.31 (c)

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

With respect to activities involving animals, the IACUC, as an agent of the research facility, shall:

- (1) Review, at least once every six months, the research facility's program for humane care and use of animals, using title 9, chapter I, subchapter A--Animal Welfare, as a basis for evaluation;
- (2) Inspect, at least once every six months, all of the research facility's animal facilities, including animal study areas, using title 9, chapter I, subchapter A-Animal Welfare, as a basis for evaluation;

The IACUC has not been meeting every six months and has not performed a site inspection every six months.

The IACUC should have met in June 2007 & June 2008 (which would have been 6 months after its previous meeting). The IACUC did meet and perform a site inspection in December 2006 & December 2007.

The IACUC also performs the site visit after the meeting, so there were no site inspections performed after the missed meeting in June 2007 & June 2008.

The IACUC shall meet & perform a site inspection every six months.  
Correct by August 15, 2008

### 3.131 (c)

#### SANITATION.

Premises (buildings and grounds) shall be kept clean and in good repair in order to protect the animals from injury and to facilitate the prescribed husbandry practices set forth in this subpart.

The floors in the Core area night houses located in pens #4, #6, & #12 have peeling paint on the floors. The walls in Core area night house # 5 have peeling paint on the walls.

These surfaces now have exposed porous concrete and do not facilitate the proper cleaning & sanitation and are not

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(c) IACUC Functions. With respect to activities involving animals, the IACUC, as an agent of the research facility, shall:

(1) Review, at least once every six months, the research facility's program for humane care and use of animals, using title 9, chapter I, subchapter A--Animal Welfare, as a basis for evaluation;

(2) Inspect, at least once every six months, all of the research facility's animal facilities, including animal study areas, using title 9, chapter I, subchapter A--Animal Welfare, as a basis for evaluation;

(3) Prepare reports of its evaluations conducted as required by paragraphs (c)(1) and (2) of this section, and submit the reports to the Institutional Official of the research facility; The reports shall be reviewed and signed by a majority of the IACUC members and must include any minority views. The reports shall be updated at least once every six months upon completion of the required semiannual evaluations and shall be maintained by the research facility and made available to APHIS. The reports must contain a description of the nature and extent of the research facility's adherence to this subchapter, must identify specifically any departures from the provisions of title 9, chapter I, subchapter A--Animal Welfare, and must state the reasons for each departure. The reports must distinguish significant deficiencies from minor deficiencies.

The IACUC last reviewed the facility program for humane care and use of animals, inspected animal facilities and prepared a report of its evaluations for submission to the Institutional Official (IO) in February 2007.

Semiannual evaluations are required to ensure facility compliance with USDA regulations, facilitate the humane care and use of regulated animals and guide IACUC functioning and oversight. Communication with the IO is essential for assurance that the facility adheres to all standards and regulations under the Animal Welfare Act.

Correct by: Immediate. IACUC facility inspections, program reviews and reports to the IO must be conducted and completed every 6 months as required under the Animal Welfare Act.

### 3.101 (a)

#### FACILITIES, GENERAL.

(a) Construction requirements.

(1) Indoor and outdoor housing facilities for marine mammals must be structurally sound and must be maintained in good repair to protect the animals from injury.

The shallow end of the dolphin enclosure, which functions as a separate medical pool, has a concrete rim that is coated with stucco-like material. This coating is cracked in many places and pieces of the material are missing leaving obvious holes and divots in the coating. At least 3 loose pieces of this coating were noted next to the pool edge during this inspection.

The rim of this pool should be repaired or replaced to maintain the housing facility in good repair. Continued deterioration of this surface could result in accidental ingestion of a foreign body by the dolphins.

Correct by: October 17, 2008.

This inspection included all animals and related facilities, IACUC function, documentation and protocol review.

### 2.31 (d)

#### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

(d) IACUC review of activities involving animals.

(1) In order to approve proposed activities the IACUC shall conduct a review of those components of the activities related to the care and use of animals and determine that the proposed activities are in accordance with this subchapter unless acceptable justification for a departure is presented in writing;

(ii) The principal investigator has considered alternatives to procedures that may cause more than momentary or slight pain or distress to the animals, and has provided a written narrative description of the methods and sources used to determine that alternatives were not available;

Protocol 08-01-A-01, approved by the IACUC, contains a written description of a database search for demonstrating compliance with the requirement to consider alternatives to painful/distressful procedures. However, the keywords documented as used in the search, "alternative" and "alternatives to animal testing," are inadequate to selectively locate possible alternatives for this specific protocol and procedures.

To assure alternatives to painful procedures are considered prior to protocol approval by the IACUC, an appropriate search for these alternatives must be conducted and subsequently documented by the principal investigator. All protocols must contain adequate written description of the methods and sources used to determine that alternatives to painful procedures were not available prior to approval by the IACUC.

Correct by: Immediate.

400 S E 29TH STREET

Type: ROUTINE INSPECTION

Date: Jan-07-2008

FORT LAUDERDALE, FL 33316

### 2.36 (b)

#### ANNUAL REPORT.

(b) The annual report shall:

(6) State the common names and the numbers of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used;

The 2007 annual report filed by the facility under reported the number of column D animals used in the 12 month period covered by the report. The annual report must accurately reflect animal use by the facility during the reporting period. The method of counting and animal tracking for report purposes should be evaluated and modified if necessary to ensure future reports are correct.

Correct by: A corrected annual report should be filed with APHIS Animal Care immediately.

Animals inspected: 4 Dogs.

Date: Sep-04-2008

PINELLAS PARK, FL 33781

### 2.35 (b) (3)

#### RECORDKEEPING REQUIREMENTS.

Every research facility shall make, keep, and maintain records or forms which fully and correctly disclose the following information concerning each live dog or cat purchased or otherwise acquired, owned, held, or otherwise in their possession or under their control, transported, euthanized, sold, or otherwise disposed of by the research facility. The records shall include any offspring born of any animal while in the research facility's possession or under its control:

The vehicle license number and State, and the driver's license number (or photographic identification card for nondrivers issued by a State) and State of the person, if he or she is not licensed or registered under the Act;

The registrant has not obtained some of the vehicle tag numbers for some of the acquisitions of donated animals.

The drivers license number (or Social Security number) AND vehicle tag number are required for all acquisitions.

Correct immediately

### 2.38 (g) (6)

#### MISCELLANEOUS.

Official tags shall be serially numbered and shall be applied to dogs or cats in the manner set forth in this section in as close to consecutive numerical order as possible.

Upon review of the acquisition records of the dogs and cats, it is apparent that the facility is not applying the official USDA ID tags in as close to consecutive numerical order as possible.

All ID tags shall be applied in as close to consecutive numeral order as possible. Alternatively, the animals may be microchipped (approval has been granted for microchipping by this inspector).

## Inspection Report

---

Correct immediately

**3.6** (a) (2) (ii)

### PRIMARY ENCLOSURES.

Primary enclosures must be constructed and maintained so that they protect the dogs and cats from injury.

There is an electrical outlet on the wall in the community cat room. This unprotected outlet tested at 118 volts, and is accessible to the cats in this room.

This outlet poses a risk of electrical injury or shock to the cats if they should put their claws, mouth, or tongue on or in it; and shall either be disconnected from the electrical current or covered to prevent injury.

Correct by September 10, 2008

20255 SW 360 ST.

Type: ROUTINE INSPECTION

Date: Sep-05-2008

HOMESTEAD, FL 33034

### 3.75 (a)

#### HOUSING FACILITIES, GENERAL.

a) Structure: construction. Housing facilities for nonhuman primates must be designed and constructed so that they are structurally sound for the species of nonhuman primates housed in them. They must be kept in good repair, and they must protect the animals from injury, contain the animals securely, and restrict other animals from entering.

A section of corral 3, currently housing baboons, is missing at least 2 large vertical pole braces used to reinforce the metal panels at the top of the corral. These braces are especially important during high wind events to keep the metal panels intact and the animals contained.

These braces should be repaired or replaced immediately as a high wind event in this area may be imminent.

Correct by: September 8, 2008.

### 3.75 (c)

#### HOUSING FACILITIES, GENERAL.

(c) Surfaces

(i) General requirements. Any surfaces that come in contact with nonhuman primates must:

(i) Be free of excessive rust that prevents the required cleaning and sanitization, or that affects the structural strength of the surface; and

(ii) Be free of jagged edges or sharp points that might injure the animals

\*The secondary containment areas of field cages 3, 6b, 7a, 12 and corral 4 have metal panels with excessively rusted areas that have created significant holes in the panels.

\*Cage 11-22 has significant rust on the enclosure chain link on the upper north side of the enclosure. A piece of wire

## Inspection Report

---

has broken off and is missing in this area. The chain link could unravel in this area and compromise containment of the animals.

\*Cage 11-4 has a large horizontal metal support pipe which is excessively rusted with a resulting hole in the northeast corner. Jagged and sharp edges were visible and easily accessible to the animals in the enclosure.

\*Cages 11-1, 11-2 and 11-9 have chain link which is excessively rusted and flaking near the tops of the enclosure. A piece of rusted chain link on the south side of cage 11-9 near the top was noted to be very thin and compromised.

The above documented surfaces must be repaired or replaced. Structural integrity of some enclosures has been compromised by excessive rust and/or also resulted in jagged edges which could cause animal injury.

Correct by: September 19, 2008

This inspection was conducted over a 2 day period September 4 & 5, 2008.

The inspection included all animals, facilities, IACUC function, documentation and protocol review.

### 3.75 (c)

#### HOUSING FACILITIES, GENERAL.

(c) Surfaces

(1) General requirements. Any surfaces that come in contact with nonhuman primates must:

(i) Be free of excessive rust that prevents the required cleaning and sanitization, or that affects the structural strength of the surface;

At least 4 primary enclosures currently housing macaques, cages 1, 3, 4 and 10, in section 18 have chain link surfaces at the top and front which are excessively rusted. The metal surfaces are peeling and flaking in some rusted areas. Structural integrity of the fencing was noted to be compromised in at least one area where wire could potentially easily break.

Primary enclosures in section 30 were noted to have excessive rust with resulting flaking and peeling of the metal surfaces. The affected surfaces were primarily near the top and front of the enclosures.

Primary enclosures in section 32 were noted to have excessive rust. The affected surfaces were primarily near the top and front of the enclosures.

At least 2 primary enclosures currently housing macaques, cages 4 and 5 in section 19 have chain link surfaces with excessive rust concentrated near the top and front of the enclosures.

Excessive rust prevents appropriate sanitation which could adversely affect animal health, but more importantly, the noted compromise of structural integrity of the enclosures is a more immediate animal containment concern.

These excessively rusted surfaces should be repaired or replaced.

### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

A proposal to conduct an activity involving animals, or to make a significant change in an ongoing activity involving animals, must contain a complete description of the proposed use of the animals.

Protocol # 05-20W involves the trapping of muskrats, fox squirrels, weasels, and other unregulated species on an off-site ranch. The protocol, as written, does not adequately describe the trapping/capture procedure. It does not provide for any details on how long the traps are set out for, the frequency of checking the traps to see if animals are inside, the maximum amount of time that an animal may be in the trap before being released back into the wild, & provisions for food & water (if applicable & based upon the period of time that they are confined in the traps).

The protocol does indicate that shade cloth will be used, but does not provide any details for protection during inclement weather (rain), if applicable. Shade cloth will not adequately protect an animal that is confined to a small area from rain. The protocol also does not provide for any security measures to protect the trapped animals from potential predators, and the public, that may be on the property during any times when the researchers are not actually present at the ranch area.

This project has ended. All future protocols shall adequately describe the procedures and proposed use of the regulated mammals.

No correction necessary at this time. Ensure that all future protocols contain a completion description of the proposed use of the animals.

### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

The IACUC shall determine that the proposed activities or significant changes in ongoing activities meet the following requirements: The principal investigator has considered alternatives to procedures that may cause more than momentary or slight pain or distress to the animals, and has provided a written narrative description of the methods and sources, e. g., the Animal Welfare Information Center, used to determine that alternatives were not available;

Procedural change ?A? for protocol # 3312 requests a change in the method of obtaining blood from hamsters. This protocol was reviewed and approved by the IACUC on 4/30/08.

The request made was for retro orbital bleeding under general anesthesia. This method of obtaining blood is considered a painful procedure. The PI only made a written statement which indicated that other methods were unviable, but did not provide a written narrative description of the methods and sources used to determine that no other alternative methods of blood collection were available.

It has been reported by the registrant that to this date, no retro orbital bleedings have been performed under this protocol.

2.31 (e) (4)

### INSTITUTIONAL ANIMAL CARE AND USE COMMITTEE (IACUC).

A proposal to conduct an activity involving animals, or to make a significant change in an ongoing activity involving animals, must contain a description of procedures designed to assure that discomfort and pain to animals will be limited to that which is unavoidable for the conduct of scientifically valuable research, including provision for the use of analgesic, anesthetic, and tranquilizing drugs where indicated and appropriate to minimize discomfort and pain to animals.

IACUC approved protocol # R 3365 indicates that buprenorphine will be administered at least once before all surgical procedures, including biopsies.

As part of this protocol, renal biopsies are performed on some of the primates. These procedures are, however, performed infrequently. It has been reported that there were only 2 primates that have undergone renal biopsies in the last year. The medical records of both ?Tank? & ?Crisco? did not indicate that these 2 primates were given buprenorphine, or any other pre operative analgesic medication(s). Post operative analgesic(s) were, however, being administered as per the protocol and the attending veterinarian.

Any significant change (i.e.: removing the requirement for pain relieving medications) from an IACUC approval protocol must contain a description of alternative procedures used to assure that discomfort and pain be limited to that which is unavoidable. These changes must have the IACUC's approval, and shall have guidance from the attending veterinarian.

### HOUSING FACILITIES, GENERAL.

Supplies of food and bedding must be stored in a manner that protects the supplies from spoilage, contamination, and vermin infestation. Substances that are toxic to the nonhuman primates but that are required for normal husbandry practices must not be stored in food storage and preparation areas.

Some small packages of food/treats/enrichment items that are delivered to the facility are first being placed on a countertop in one of the food storage rooms before they are redistributed to other food storage areas. There are also containers of soaps/cleaning agents that are also on this countertop and in very close proximity to these food items.

Items that are potentially toxic to the primates, and which pose a risk of contamination of the food, shall be stored away from the food.

The soaps/cleaning agents were immediately removed.

No further correction is necessary
